REVIEWER INDEX

to Volume 116, May–August, 1987

Below is a list of the people who reviewed manuscripts for GENETICS during the preparation of Volume 116. The aim of GENETICS is to communicate significant research. To succeed, we must recognize what is significant; we must make sure the presentation is accurate, unambiguous and yet readable. For this, we depend heavily on our reviewers, who perform this indispensable service without reward. The quality of the journal can be no better than the quality of their efforts. We apologize to any reviewer whose name has been inadvertently omitted, and we are sincerely grateful to all.

Akeson, R.
Allendorf, F. W.
Anderson, L. E.
Anderson, W. W.
Aquadro, C. F.
Asmussen, M.

Barker, J. S. F.
Barton, N.
Bender, W.
Benyajati, C.
Birkenmeyer, E.
Bocke, J.
Bowman, B.
Brown, A. H. D.
Bulmer, M. G.

Campbell, R.
Carlson, J.
Carlson, M.
Charlesworth, B.
Cheverud, J. M.
Chumley, F.
Churchwood, G.
Clark, A. G.
Clark, S. H.
Cone, K. C.
Copeland, N.
Craddock, E. M.

Davis, R. H.
Dellaporta, S.
Denell, R. E.
DeSalle, R.
Dove, W. F.

SUBJECT INDEX

to Volume 116, May–August 1987

ADR6
  cloning and mapping, alcohol dehydrogenase II isozyme from *Saccharomyces cerevisiae*, 523
  identification and characterization, alcohol dehydrogenase II isozyme from *Saccharomyces cerevisiae*, 523
Alcohol dehydrogenase
  Mu transposon insertion, maize, 469
  neutral molecular evolution, test of, nucleotide data, 153
  partial correction of structural defects, interallelic complementation, *Drosophilia melanogaster*, 265
  sporulation and expression, *ADR6* and, 523, 531
  structural mutants, protein blotting, *Drosophilia melanogaster*, 253
Allele
  Hprt a and *Hprt b*, protein turnover, mice, 313
  MAL43-C, yeast, 23
  substitution rates, stabilizing selection, 479
Amplification, chromosome specificity, polysomy promotion, yeast, 371
Aneuploidy, chromosome specificity, polysomy promotion, yeast, 371
Ascobolus
  gene conversion pattern, large heterologies, linked point mutations, 45
  genetic instability, 33
Assays
  detection of mutations, Tn*10* transposition, *Escherichia coli*, 185
  protein blotting, *Adh* structural mutants, *Drosophilia melanogaster*, 253
Avena sativa, 613

Bacteriophage Mu, generalized transduction, minimu plasmid phage, 201

Caenorhabditis elegans, 377
Chloroplast genomes, evolution, Avena, 613
Chromosome(s)
  modifier genes, sex ratio trait, *Drosophilia pseudoobscura*, 275
  rearrangements, *zeste-white* interaction, *Drosophilia melanogaster*, 285
  X-4 translocations, meiotic drive, *Drosophilia melanogaster*, 409
Chromosome *X*
  Y and
    coevolution of rDNA arrays, *Drosophilia melanogaster*, 241
    patterns of variation, ribosomsal DNA spacers in *D. melanogaster*, 225
Chromosome *Y*, reduced genetic activity, genetic hitchhiking, 161
Chromosome *6*, homeo box gene, mouse, 607
Clock, molecular, overdispersion, 169
Cloning
  ADR6, alcohol dehydrogenase II isozyme from *Saccharomyces cerevisiae*, 523
  in vivo, *prlC*, *Escherichia coli* K12, 513
Complementation, interallelic, correction of *Adh* structural defects, *Drosophilia melanogaster*, 265
Cotton, translocations, duplication-deficiencies, transmission of, 321

Deletion analysis, promoter of ninaE gene, *Drosophilia melanogaster*, 565
Disease resistance, genetic map of lettuce, restriction fragment length polymorphism, 331
Disequilibrium
  pattern analysis
    Danish HLA *A* and *B* locus data, 633
    theory, 623
DNA
  adenine methylation, recognition sites, *Escherichia coli*, 343
  evolution of ribosomal tracers, *X* and *Y* variation, *Drosophilia melanogaster*, 225
  methylation, mutations, dam recognition sites, 343
  photorepair-deficient mutant, isolation and characterization, *Drosophilia melanogaster*, 233
mtDNA, polymorphisms, temporal and spatial heterogeneity, *Drosophilia mercatorum*, 215
rDNA, coevolution of *X* and *Y*, *Drosophilia melanogaster*, 241
Double-strand-break repair, tests of, homologous recombination, 501
Drosophilia melanogaster, 55, 67, 75, 87, 225, 233, 253, 265, 285, 389, 399, 409, 423, 433, 565
Drosophilia mercatorum, 215
Drosophilia persimilis, 555
Drosophilia pseudoobscura, 275, 555
Drosophilia silvestris, 415
Duplication, deficiencies from cotton translocations, transmission of, 321

Epistasis, second and third chromosome gene arrangements, components of genetic variation, *Drosophilia melanogaster*, 87
Escherichia coli, 185, 201, 343, 349, 359, 499, 513
Evolution
  constant environment, *Escherichia coli*, 349
  molecular
    nucleotide sequences, maize plastid genes, 127

overdispersed clock, 169
twenty-five years ago in *Genetics*, Motoo Kimura, Perspectives, 183
neutral molecular, test of, nucleotide data, 153
ribosomal DNA spacers, *X* and *Y* variation, *Drosophilia melanogaster*, 225
X and *Y* rDNA arrays, *Drosophilia melanogaster*, 241

Fertility, male
variation and pairwise mating, *Picea glauca*, 141
X-heterochromatic functions, *Drosophilia melanogaster*, 399
Fitness, heterokaryotypes, *Drosophilia melanogaster*, 415

Genes
αA-crystallin, linkage in *t*-haplotypes, mouse, 107
action, quantitative trait loci, maize, 113
Adh1, *Mu* transposon insertion, maize, 469
arrangements, components of genetic variation, *Drosophilia melanogaster*, 87
b2 mutation derivatives, instability, Ascobolus, 33
conversion
heterologies, Ascobolus, 45
phage λ and plasmid λdv, 501
disruption, *URA3* strains, 541
expression, steroid-inducible, mouse kidney, 593
homeo box, chromosome *6*, mouse, 607
MAL43, glucose-repression-insensitive mutation, yeast, 23
mec-4 and *unc-3*, nervous system structure, *Caenorhabditis elegans*, 377
modifier, sex ratio trait, *Drosophilia pseudoobscura*, 275
neurogenic, genetic analysis of *Delta*, *Drosophilia melanogaster*, 433
plastid, nucleotide sequences, maize, 127
position effect, *HML* and *HMR*, yeast, 9
rearrangement, myelin basic protein, mouse, 447
Regulator of bithorax locus, homoeosis, *Drosophilia melanogaster*, 389
regulatory, alcohol dehydrogenase II isozyme from *Saccharomyces cerevisiae*, 523, 531
RNA1, chromosome specificity, yeast, 371
steroid sulfatase, linkage to *sex-reversed* mutation, mouse, 465
Genetic linkage, homeo box gene, chromosome *6*, mouse, 607
Genetics
behavioral, perspectives, 499
hitchhiking, reduced activity, chromosome *Y*, 161
molecular, point mutagenesis, *Mus musculus*, Perspectives, 5
twenty-five years ago, Motoo Kimura, molecular evolution, Perspectives, 183
Glucose, *MAL43-C* allele, yeast, 23

Haplotypes, heterokaryotypes, high fitness, *Drosophilia melanogaster*, 415
Heterochromatin, X-heterochromatic functions, *Drosophilia melanogaster*, 399
Heterosis, high fitness, *Drosophilia silvestris*, 415
HLA, *A* and *B* locus data, disequilibrium pattern analysis, 633
Homoeosis, *Regulator of bithorax* locus, lethal syndrome, *Drosophilia melanogaster*, 389
Homogenization, tandem repeats, nucleotide sequence conversion, wheat, 487
Hox-1.5, map, chromosome *6*, 607
Hya versicolor, inheritance in tetraploids, 299
Hypoxanthine phosphoribosyltransferase, altered turnover, erythroid cells, mice, 313

Inheritance, tetraploids, progeny ratios, *Hya versicolor*, 299
Isozymes
genetic map of lettuce, restriction fragment length polymorphism, 331
quantitative trait loci, maize, 113

Kidney, *RP2* mRNA expression, steroid-inducible, 593
Kimura, Motoo, twenty-five years ago in *Genetics*, molecular evolution, Perspectives, 183

Lactate dehydrogenase-A, complete nucleotide sequence, exon-intron organization, mouse, 99
Lettuce, genetic map, restriction fragment length polymorphism, 331
Linkage disequilibrium, haplotypes, pattern analysis, 623
Linkage mapping, ancestral tetraploidy, salmonid fish, 579
Locus
αA-crystallin, *t*-haplotypes, mouse, 107
overdispersed molecular clock, 169
quantitative-trait, maize, 113
rosy
mutations affecting expression, *Drosophilia melanogaster*, 55
structural gene sequence, *Drosophilia melanogaster*, 67
waxy, maize, Perspectives, 339

Maize
plastid genes, molecular evolution, nucleotide sequences, 127
quantitative trait loci, 113
waxy locus, Perspectives, 339
Maltose, fermentation regulation, *MAL43-C* allele, yeast, 23
Mapping, restriction fragment length polymorphism, markers, lettuce, 331
Mathematical model, neutral molecular evolution, test of, nucleotide data, 153

Mating, pairwise, male fertility variation, *Picea glauca*, 141
Mating type, *SIR* genes, yeast, 9
Meiosis
genetic instability, Ascobolus, 33
modifier genes, sex ratio trait, *Drosophilia pseudoobscura*, 275
Meiotic drive
modifier genes, sex ratio trait, *DRosophilia pseudoobscura*, 275
X-heterochromatic functions, *Drosophilia melanogaster*, 399
X-4 translocations, sex chromosome pairing, *Drosophilia melanogaster*, 409
Modifiers, dosage-dependent, homoeotic mutations, *Drosophilia melanogaster*, 75
Mosaics, nervous system structure, *Caenorhabditis elegans*, 377
Mouse
altered turnover, hypoxanthine phosphoribosyltransferase, 313
DNA polymorphisms, *t*-haplotypes, 107
homeo box gene, chromosome *6*, 607
kidney, steroid-inducible *RP2* mRNA expression in, 593
myelin basic protein gene sequences, 447
sex-reversed mutation, linkage of steroid sulfatase gene, 465
structure of lactate dehydrogenase-A gene, exon-intron organization, 99
tail length, new recessive mutation, 601
mRNA, steroid-inducible, evolution of, mouse kidney, 593
Mus musculus, 5
Mutagenesis
Adh structural mutants, protein blotting, *Drosophilia melanogaster*, 253
point, molecular genetics, *Mus musculus*, Perspectives, 5
spontaneous, dam recognition sites, *Escherichia coli*, 343
Tn*10* transposon, yeast, 191
Mutants, photorepair-deficient, isolation and characterization, *Drosophilia melanogaster*, 233
Mutations
b2 derivatives, genetic stability, Ascobolus, 33
detection of, generalizable test, *Escherichia coli*, 185
homoeotic, dose-dependent modifiers, *Drosophilia melanogaster*, 75
Mu transposon insertion, maize *Adh1*, 469
MAL43-C allele, yeast, 23
nonpoint, gene conversion pattern, large heterologies of Ascobolus, 45
repair-resistant, Neurospora, 207
sex-reversed, linkage of steroid sulfatase gene, mouse, 465
signal sequence, suppressor of, *Escherichia coli* K12
temperature-sensitive paralytic, *enhancer of seizure*, *Drosophilia melanogaster*, 423
Myelin basic protein, gene sequences, mouse, 447

Nervous system, structure, *mec-4* and *unc-3* genes, *Caenorhabditis elegans*, 377
Neurogenesis, genetic analysis of *Delta*, *Drosophilia melanogaster*, 433
Neurospora, repair-resistant mutations, 207
ninaE, promoter of, *Drosophilia melanogaster*, 565
Nucleotides
complete sequence, lactate dehydrogenase-A, mouse, 99
data, neutral molecular evolution, test of, 153
molecular evolution and sequences, maize plastid genes, 127

Pairing
X-heterochromatic functions, *Drosophilia melanogaster*, 399
X-4 translocations, meiotic drive, *Drosophilia melanogaster*, 409
Paralysis, temperature-sensitive mutations, *enhancer of seizure*, *Drosophilia melanogaster*, 423
Phage: *see* Bacteriophage
Photorepair, deficient mutant, isolation and characterization, *Drosophilia melanogaster*, 233
Picea glauca, male fertility variation, pairwise mating probabilities, 141
Plasmid λdv, recombination of, tests of double-strand-break repair, 501
Plasmids
low-copy, cloning procedure, 513
minimu phage, high frequency generalized transduction, 201
Polymorphism
αA-crystallin, *t*-haplotypes, mouse, 107
mtDNA, temporal and spatial heterogeneity, *Drosophilia mercatorum*, 215
restriction fragment length, genetic map, lettuce, 331
Population, mtDNA polymorphisms, temporal and spatial heterogeneity, *Drosophilia mercatorum*, 215
Promoter, ninaE gene, *Drosophilia melanogaster*, 565
Protein
export, *prlC* gene, 513
turnover of hypoxanthine phosphoribosyltransferase, erythroid cells, mice, 313
Pseudolinkage, ancestral tetraploidy, salmonid fish, 579

RAD55, mutants of yeast, temperature, osmotic strength and mating type effects, 547
rDNA, chromosome specificity, polysomy promotion, yeast, 371
Recombination
frequencies, ancestral tetraploidy, linkage mapping, salmonid fish, 579

genetic instability, *b2* derivatives, Ascobolus, 33
homologous, tests of double-strand-break repair, 501
meiotic, heterologies, Ascobolus, 45
null mutants of *RAD55* gene, *Saccharomyces cerevisiae*, 547
Tn*10*- and IS*10*-promoted transpositions, *Escherichia coli* and *Salmonella*, 359
Reproductive isolation, male and female sterility, hybrids of *Drosophila pseudoobscura* and *D. persimilis*, 555
Restriction endonuclease analysis, chloroplast genome, evolution, Avena, 613
RNA, ribosomal, homogenization of tandem repeats, wheat, 487

Saccharomyces cerevisiae, 9, 191, 371, 523, 531, 541, 555
alcohol dehydrogenase II isozyme from, *ADR6* for sporulation and expression of, 523, 531
Salmonella, 359
Salmonid fish, ancestral tetraploidy, linkage relationships reflecting, 579
Saxitoxin, temperature-sensitive mutations, *enhancer of seizure*, *Drosophilia melanogaster*, 423
Selection
periodic, evolution, constant environment, 349
stabilizing, substitution rates, 479
Sex determination
genetic hitchhiking, reduced activity, chromosome *Y*, 161
X-heterochromatic functions, *Drosophilia melanogaster*, 399
Sex ratio, modifier genes, *Drosophilia pseudoobscura*, 275
Signal sequence, mutations in *Escherichia coli* K12, *prlC* suppression of, 513
Sodium channel, *enhancer of seizure*, temperature-sensitive paralytic mutations, *Drosophilia melanogaster*, 423
Speciation, male and female sterility, hybrids of *Drosophila pseudoobscura* and *D. persimilis*, 555
Sporulation, gene required for, alcohol dehydrogenase, 523, 531
Sterility, male and female hybrids, *Drosophila pseudoobscura* and *D. persimilis*, 555
Steroid sulfatase, linkage to *sex-reversed* mutation, mouse, 465

Tetraploids, inheritance in, *Hya versicolor*, 299
Tetraploidy, ancestral, linkage mapping, salmonid fish, 579
t-haplotypes, DNA polymorphisms, mouse, 107
t-int, interaction with *T/t* complex, tail length and, mouse, 601
Transduction, generalized, minimu plasmid phage, 201
Transposable element
Tn*10*- and IS*10*-promoted, rearrangements and, *Escherichia coli* and *Salmonella*, 359
waxy locus, maize, Perspectives, 339
Transposon
Mu insertion, *Adh1*, maize, 469
Tn*10*, detection with generalizable test, *Escherichia coli*, 185
Tn*10* mutagenesis, yeast, 191
Transvection, *zeste-white* interaction, chromosomal rearrangements, *Drosophilia melanogaster*, 285
T/t-complex, tail, mutations and, 601

Ultraviolet light, repair-resistant mutations, Neurospora, 207

Wheat, homogenization, tandem repeats, 487

Xanthine dehydrogenase, *rosy* locus expression
mutations affecting expression, *Drosophilia melanogaster*, *55*
sequence, *Drosophilia melanogaster*, 67

Yeast
alcohol dehydrogenase II isozyme from, gene for sporulation and expression, 523, 531
chromosome specificity, polysomy promotion, *RNA1* gene, 371
MAL43-C allele, 23
multiply disrupted strains, *URA3* in construction of, 541
null mutants of, temperature, osmotic strength and mating type effects, 547
SIR genes, mating type, 9
Tn*10* transposon mutagenesis, 191

Zeste-white interaction, chromosomal rearrangements, *Drosophilia melanogaster*, 285
